### Hunt Role

*Project Management*

### Construction Cost

*\$10.3 million*

### Completed

*July 2005*

### Client

*Purdue University  
Research Foundation*

This 16,000 SF single story, GMP pharmaceutical facility is located in Purdue's Research Park and is an FDA-Validated Current Good Manufacturing Practices Facility built to produce a tuberculosis-fighting drug developed by Eli Lilly. This facility positions Purdue as one of only a select few universities allowed to manufacture drug products for human consumption. The facility will enable Purdue to develop staff, facilities, and new programs to educate students in all aspects of market approach; from drug development to manufacturing to regulatory affairs.
